About Me

Backend-focused engineer with strong foundations in algorithms and system design. Experience building and evaluating AI systems in production environments.

Professional Experience

SPRING 2026
ARION BANKI - SOFTWARE ENGINEERING INTERN (AI & AUTOMATION)

- Built automated evaluation framework for AI agents, replacing manual processes
- Created evaluation dataset from company website for testing agent performance
- Implemented input/output guardrails to improve reliability and safety of AI system
- Debugged framework issues via source code analysis and Azure LLM integrations
- Collaborated in an agile team using Git, Jira, and code reviews, contributing to production-level AI systems under real security constraints

2024 - 2026
REYKJAVIK UNIVERSITY - TEACHING ASSISTANT

TA for Algorithms, Calculus, and Discrete Mathematics I & II in Reykjavik University's Computer Science program.

- Taught weekly sessions for ~60 students across multiple courses, explaining algorithms, data structures, and mathematical concepts
- Helped students debug code and understand algorithmic problem-solving approaches (Java-focused in Algorithms)
- Strengthened ability to communicate complex technical concepts clearly and collaborate with students at different skill levels

SUMMER 2025
RANNÍS - NEURAL ARCHITECTURE SEARCH RESEARCHER

- Implemented genetic algorithms in Python (PyTorch) for CNN architecture search
- Built training pipelines for multi-hour experiments across sleep datasets
- Iterated on optimization strategies through experimentation and research

Projects

- Synthesizer Company Website (Final Project)
  - Refactored a ~10K LOC codebase into a clean MVC architecture under tight deadlines
  - Improved structure, maintainability, and separation of concerns across the entire backend system
  - Worked extensively with backend logic and system design to stabilize and organize a near-production application
- Monkey Business — Web Application
  - Built a full-stack job application platform using Django (Python), SQL, and JavaScript
  - Designed backend logic, database interactions, and user-facing features for handling applications

Education

REYKJAVÍK UNIVERSITY
BSc in computer science
Aug 2023 - May 2026

- Top 2% of cohort (GPA: 9.38)

LUND UNIVERSITY
Exchange Semester
Jan - May 2025

Skills

- Languages: Java, Python, C++, SQL
- Backend & Tools: PostgreSQL, REST APIs, JSON, Git
- Other: TensorFlow, PyTorch, NumPy

Languages

Icelandic: Native Speaker
English: Fluent
Japanese: Elementary

Achievements

- Named to the Dean's List (Fall 2024) for academic excellence (GPA: 9.80).
- Named to the Dean's List (Autumn 2025) for academic excellence (GPA: 9.60).
- Awarded a research grant from Rannís (Nýsköpunarsjóður námsmanna).
